

Lainhart & Mastens Dams (In Design)

Loxahatchee River, FL

Project Challenges	Solution	Support	Outcome
<ul style="list-style-type: none"> Stabilize soil and analyze seepage mitigation rates at two critical dams Extremely sensitive environmental constraints 	<ul style="list-style-type: none"> Stabilize soils around dams Monitor and analyze seepage mitigation rates Implement stabilization with minimal disruption to the environment with environmentally friendly solution 	<ul style="list-style-type: none"> Engineering partner Designed injection port quantity and depth Pre-construction meeting On-site installation 	<ul style="list-style-type: none"> Project is in design phase Notice to proceed was given March 16, 2015 with design due May 2015 Project scheduled for January 2016, during dry season
